EDUCATION

Bachelor's Degree (B.Sc.)

Addis Ababa University

2021 - 2025

TECHNICALNSKILLS

AI / Machine Learning

- Computer Vision
- Deep Learning
- CNNs
- YOLOv8
- Model Training & Fine-tuning
- Dataset Preparation
- Image Annotation

Programming

- Python
- JavaScript / TypeScript
- Dart
- Go

PROFILE

AI/ML Engineer with practical experience in Computer Vision, deep learning, Python, and object detection. Experienced in dataset curation, training and fine-tuning Pre trained machine learning models(Like YOLO models) for extended performances, and contributing to advanced AI training pipelines—including reinforcement learning paradigms and recursive rubric optimization for visual reasoning (Project Orion). Proven track record of building assistive real-world applications using fine-tuned models. Seeking flexible remote AI/ML opportunities to contribute to cutting-edge projects while scaling advanced machine learning competencies.

WORK EXPERIENCE

Dexel Software Development PLC

Mobile, Desktop and Web application developtmens JANUARY 2026

- Developing mobile and Android applications with Flutter and React Native with robust testing.
- Designing and developing desktop apps and games.
- Web applications and deployments.
- Collaborating with the developer team is essential to implement updates and security measures, enhancing overall system reliability.

Rroboflow Nebula

AI Training Contributor – Project Orion September 2026 – October 2026

- The project is focused on training AI on advanced visual reasoning capabilities.
- Curated high-precision real-world image and video datasets, deliberately targeting complex spatial scenarios where traditional models fail but humans succeed.
- Authored detailed natural language problem-solution pairs and logical rationale to reinforce model understanding.
- Developed atomic evaluation rubrics utilized in recursive training and preference alignment pipelines to optimize model response accuracy.

Commercial Bank of Ethiopia

IS support Engineer October 2024 – February 2025

- providing technical support for information systems and ensuring optimal performance of IT infrastructure.
- Diagnosing and troubleshooting various hardware and software issues.
- Network installations in new branches.
- Collaborating with the IT team is essential to implement updates and security measures, enhancing overall system reliability.

AI/ML Tools

- Ultralytics YOLO
- Roboflow
- CVAT
- Kaggle

Backend & Deployment

- REST APIs
- PostgreSQL
- Docker

Application Development

- Flutter
- React & React Native
- Vue.js

PROJECTS

Assistive Navigation & Computer Vision App

Python | YOLOv8 | Computer Vision | Flutter | Firebase

- Developed an assistive mobile application designed to help visually impaired users navigate their surroundings.
- Prepared and combined image datasets for object-detection training.
- Trained and fine-tuned a YOLOv8 object-detection model for real-world environmental objects.
- Evaluated model performance and improved detection through additional dataset preparation and training.
- Integrated the trained model with a Python backend to perform object detection from mobile-camera input.
- Implemented audio feedback and on-screen object information to help users understand detected surroundings.
- Integrated map-based navigation and destination input into the mobile application.
- Tested the system on a physical Android device and incorporated feedback from visually impaired users.

RecipeJoy (Nuxt 3, Go, PostgreSQL, Docker)

- Architected and built a full-stack recipe platform using Nuxt 3 (TypeScript) for the frontend and Go for the RESTful API backend.
- Implemented secure JWT authentication, registration/login flows, automatic token verification on app startup, and global route middleware for protected routes.
- Integrated PostgreSQL with Hasura GraphQL and GORM for efficient data persistence across users, recipes, comments, ratings, and likes.
- Containerized the Go API, Hasura, and PostgreSQL using Docker Compose for seamless environment setup.
- Visit the app here, backend server, and source code.

Music Manager web app

- A MERN stack web app that is used to store a person's favorite songs based on the kind of divisions of songs.
- Makes the user able to store, update, and delete songs in the database dedicated for the user and see recommended songs and albums to add to the favorite stores.
- Visit the app and source code.

HOBIES

- Sports
- Voluntary activities
- Reading Fiction books
- Brain Storming Discussions
- History and Politics

EXTRA-CURRICULAR ACTIVITIES

- voluntary at Bore Sub City Administration, Bore Sub City
- Summer Tutoring and Mentoring at elementary schools
- Religious Community
